

Mobile traffic monetization tools

International Mobile Ad Tech Company

Tapgerine is offering developers multiple effective tools to monetize Android and iOS apps. Developers can reach plenty of advertisers and creative content to display inside the app and manage all of this through Tapgerine API integration.

**Increase revenue on Android and iOS
Tapgerine SDK.** If you are a mobile
apps developer, our **SDK** will allow you
to quickly integrate and present our
offerwall and other creatives to profit
from your mobile app.

Native Ads

Are shown within the app interface itself and match the overall structure and appearance of the app or website.

Tapgerine Tools complement existing ads by reformatting them into native ads and placing them in the right places for best conversions.

In-stream ads are placed in video content or in apps.

These ads can be placed before, after or mid-content to reach your audience.

Targeted offer walls

Capture users' attention by presenting them a certain offer at some point during their mobile experience. If configured correctly they can be very lucrative in terms of driving conversion rates up.

Traffic Distribution System (TDS) is an automated tool for publishers to monetize mobile traffic. It is as simple as choosing the offers you like and leaving the rest to our well-tuned machine algorithm which will distribute the traffic across these offers in the most effective way.

Monetization tools faster-boosting publisher profits. Choose a channel/format that fits you best or rely upon our smart, self-learning system. AI algorithms, based on machine learning are at your service for free!

Learn about the opportunity to feel the benefits of our new products, become one of the first users of Tapgerine own solutions for traffic monetization.
